Dasti-Craft README

I.Prototype Link

II.Implementation

The prototype was built with Proto.io, a collaborative interface design tool. We chose to design for the iphone since our next prototype will be developed in Android. Proto.io was useful because it has lots of design and implementation tools. One benifit of Proto.io was that it have many UI templates and onboarding support.

The prototype is very interactive, it tells where to touch on the button further ,which helps to understand all the phenomena of the application.

III.Operating Instructions

General Use

If you click anywhere on the current screen, prototype will highlight next clickable areas in blue. Click on these areas to navigate to other screens or initiate pop-ups in the prototype.
